Gamma Overdose

In the case of the fraudulent BNL Health Assessment, where enormous Beta & Alpha radiation levels were measured in soil, groundwater, vegetation & the Peconic River for most of these radionuclides, they not only failed to measure **X-RAY** & **Gamma** radiation; they concealed reports dating back to 1947 that did; including these linked to <http://gfxtechnology.com/BNL.html>:

- **"RADIOLOGICAL EMISSIONS AND ENVIRONMENTAL MONITORING FOR BROOKHAVEN NATIONAL LABORATORY, 1947 –1961"** reveals enormous nuclear fallout from 29 uranium fuel cartridge explosions between 1952 & 1957. (DOE wants over \$800 for underlying reports.)
- **12 Radiation Reports Show Long Island shipped radioactive food that continues to poison millions of Americans: 1947-1961 -- 1962 -- 1964 -- 1966 -- 1970 -- 1974 -- 1975 ---1976 -- 1979 -- 1980 ---1981 -- 1982**

- Nor did the miscreants that ran BNL & Grumman before public water was connected ever warn us that we may have received a **Gamma-overdose** in excess of the 4 mrem/yr limit the EPA finally got around to setting in the Safe Drinking Water Act of 1976, but never enforced.

When I watched last June's Grumman Plume video, I heard some liar say Grumman never produced radioactive waste.
